| <b>[Overview and purpose of the course]</b>  |                         |                          |  |  |                      |
| This course aims to clarify the current status of agriculture in Africa as it relates to ecological and social changes resulting from globalization. Additionally, we consider “ African ways ” for achieving sustainable development that are based on a deep understanding of the relationships between food, the economy, and energy, as practiced by residents of rural areas. |                         |                          |  |  |                      |
| <b>[Course objectives]</b>   |                         |                          |  |  |                      |
| The students can understand holistically the current status of agriculture in Africa from various viewpoints of ecology, society, culture and history. they became to debate the key issues facing rural areas such as land conflict, shortage of fuel woods, environmental degradation in semi-arid areas, Africa.  |                         |                          |  |  |                      |
| <b>[Course schedule and contents]</b>  |                         |                          |  |  |                      |
| 1-3. Ecology in Africa<br>4. Tropical Crops<br>5-7. Indigenous Farming Systems in Africa<br>8. Changes of Agriculture<br>9. Food Security<br>10. Energy<br>11. | <b>Target year</b>   | 1st & 2nd year students           | <b>Number of credits</b> | 2  | <b>Year/semesters</b>  | 2021/First semester |
| <b>Days and periods</b>  | Fri.2                             | <b>Class style</b>       | Lecture  | <b>Language of instruction</b>   | Japanese            |
| <b>[Overview and purpose of the course]</b>  |                                   |                          |  |  |                     |
| <p>An area is a space characterized by its geographical conditions and historical backgrounds. Ecology is a field in which one strives to understand the environment in which organisms live, and how organisms live and interact with their environments and other organisms. Regional ecology, then, is a useful field for area studies since it seeks to understand the area-specific lives of organisms and humans while considering the geography and history of the research areas. This course will take up cases from the areas surveyed in graduate courses, and we will learn and discuss the ecological approaches to develop the area studies.</p> <p>The course will include explanations and analyses of approaches to understanding the ecologies of these regions.</p> |                                   |                          |  |  |                     |
| <b>[Course objectives]</b>   |                                   |                          |  |  |                     |
| <p>When students arrive at their own respective survey sites, they can apply the necessary theories and methods that are required for an ecological understanding of the natural environment, material resources, and social characteristics in the research areas.</p>  |                                   |                          |  |  |                     |

| <b>Days and periods</b>  | Tue.4                        | <b>Class style</b>       | Lecture  | <b>Language of instruction</b>   | Japanese and English |
| <b>[Overview and purpose of the course]</b>  |                              |                          |  |  |                      |
| Using multi-disciplinary research data I have collected, this course discusses the entwined relationships between human activities and the environment with special emphasis on the exchange of various natural and social resources among people in contemporary African societies. Each year, I will select a theme pertaining to this subject and develop empirical and theoretical arguments together with the course participants. In the 2021 course, we will reconsider hunter-gatherer childhood with setting "play" as the key concept, based on both the lecturer ' s field research on several groups of San and the literature review of the relevant studies of the wider hunter-gatherer groups. |                              |                          |  |  |                      |
| <b>[Course objectives]</b>   |                              |                          |  |  |                      |
| In this course, we will develop the above areas of interest by analyzing selected domains of child play based on ethnographic materials.   |                              |                          |  |  |                      |

| <p>One of the most important parts of daily life in contemporary Africa consists of livelihood activities, such as agriculture, cattle breeding, craftworks, retail, etc. In this lecture, the speaker discusses her fieldwork on some of these activities, including agricultural techniques, craftwork and souvenir-making, focusing on human-object relationships. By sharing the results of this fieldwork, we will shed light on local peoples' attitudes to environmental and social transformation in contemporary Africa, the importance of human-object relationships in African life, and the creativity generated through interactions between researchers and local people in the context of livelihood.</p>   |  |                          |  |  |                     |

| <b>[Overview and purpose of the course]</b>  |   |                          |  |   |                                 |
| <p>This course examines issues to do with livelihood in agricultural villages in Africa and their historical development, focusing mainly on the relationship between human society and plants (theories of agricultural science, anthropology, ecology, crop evolution, ethno-botany, domestication). This year we will look at the issue of local (indigenous) knowledge, treating it as a cultural resource accumulated by people in Africa over many centuries, and at the new types of people who positively use it, as a way of examining problems in endogenous development in rural society. Rural villages, education, museums, biological diversity, material culture, markets, and 'sleep culture' will be key words in our approach to these problems.</p> |   |                          |  |   |                                 |
| <b>[Course objectives]</b>   |   |                          |  |   |                                 |
| <p>Students will be able to have the general knowledge of African Agricultural livelihood and their historical development.<br/>You will be able to have the range of diverse issues that African Agricultural communities are currently facing.</p>   |   |                          |  |   |                                 |

| <b>Course title<br/>(and course title in English)</b>   | 野生動物保全論<br>Wildlife Conservation |                          | <b>Instructor's name, job title, and department of affiliation</b> | Graduate School of Asian and African Area Studies<br>Professor, YAMAKOSHI GEN |                      |
| <b>Target year</b>  | 1st & 2nd year students          | <b>Number of credits</b> | 2  | <b>Year/semesters</b>   | 2021/Second semester |
| <b>Days and periods</b>   | Mon.3                            | <b>Class style</b>       | Lecture  | <b>Language of instruction</b>  | Japanese             |
| <b>[Overview and purpose of the course]</b>   |                                  |                          |  |   |                      |
| Wildlife conservation is an important global issue since it concerns the preservation of biodiversity in a whole variety of ecosystems all over the world. On the other hand, for the people who live in the habitats of the endangered animals, wildlife conservation is "their own" problem highly specific to the region, and based on a particular local history and their way of thinking towards animals. In this class we will take a fresh look at wildlife conservation as one contemporary problem in which global and local concerns intersect. Students will gain an understanding of the relevant basic concepts through a range of readings and class discussion. |                                  |                          |  |   |                      |
| <b>[Course objectives]</b>  |                                  |                          |  |   |                      |
| Students are expected to acquire basic knowledge about keywords which are taken up at the class, to use such keywords in active discussions at the class, in anticipation of eventually activate ideas obtained through such discussions during field researches.   |                                  |                          |  |   |                      |
| <b>[Course schedule and contents]</b>   |                                  |                          |  |   |                      |
| Class schedule and contents will be decided in consultation with students at the first meeting. The tentative curriculum is as follows:   |                                  |                          |  |   |                      |
| Week 1:<br>Explanation of the direction of the class.   |                                  |                          |  |   |                      |
| Weeks 2-7:<br>In these weeks, We will discuss and understand diverse approaches to nature conservation, using specific examples. Main discussion points: "Who" is protecting "what kind" of nature, by "which methods," and for "what purposes"? Debates on preservation v.s. conservation, the rights and wrongs of artificial intervention, protected areas and colonialism.  |                                  |                          |  |   |                      |
| Weeks 8-10:<br>In these weeks, we will look at the debates on environmental conservation, and try to deepen the understanding by putting the debates in broader contexts of Area Studies. Main discussion points: Participatory development debates, humanitarian intervention, market and neo-liberalism, wholism in conservation.   |                                  |                          |  |   |                      |
| Weeks 11-15:<br>In these weeks we will choose certain keywords, depending on the interests of students in the class, and have discussions on the specific sets of problems.   |                                  |                          |  |   |                      |
| Keyword examples:   |                                  |                          |  |   |                      |
| -----<br><b>Continue to 野生動物保全論 (2)</b>   |                                  |                          |  |   |                      |

## 野生動物保全論 (2)

Biodiversity, environmental sustainability, the problem of invasive alien species, resilience, ecological philosophy, the "Should Trees Have Standing" debate, the Animal Rights debate, citizens' rights movements and nature conservation philosophy, animal welfare and empathy, alpinism and adventure, nature esthetics, the birth and history of landscape paintings, nature writing and correspondence, religion and environmentalism.

| <p>Water is vital for human life, and excreta (human waste) is necessarily generated from daily life. Securing water, sanitation and hygiene (called WASH) is one of the major challenges in sub-Saharan Africa. In this course, students will learn the present conditions, impact on health and the environment, management, and human-environment-society interaction of WASH, followed by the discussion on the ways to achieve WASH for sub-Saharan Africa. Students will also learn how to obtain physico-chemical and microbiological data on WASH in the field.</p>   |  |                          |  |   |                     |

| <b>Days and periods</b>  | Tue.2                     | <b>Class style</b>       | Lecture  | <b>Language of instruction</b>                             | Japanese            |
| <b>[Overview and purpose of the course]</b>  |                           |                          |  |  |                     |
| Many students of the Graduate School of Asian and African Area Studies conduct a field research in Asia and Africa, where various kinds of infectious diseases, which does not exist in Japan, are observed. This lecture aims to deepen the knowledge on tropical diseases and the practical methods to conduct a field research healthily. |                           |                          |  |  |                     |
| <b>[Course objectives]</b>   |                           |                          |  |  |                     |
| Students will acquire the knowledge on 1) endemic diseases in their research field, 2) self-management skills for their health in the field, and 3) preventive measures against tropical diseases and their treatment.   |                           |                          |  |  |                     |
| <b>[Course schedule and contents]</b>  |                           |                          |  |  |                     |
| 1st lecture: An introduction to the study of tropical diseases   |                           |                          |  |  |                     |
| 2nd lecture: Mosquito-borne Diseases I: Malaria  |                           |                          |  |  |                     |
| 3rd lecture: Mosquito-borne Diseases II: Dengue fever, Yellow fever, Chikungunya fever, West Nile fever, etc.  |                           |                          |  |  |                     |
| 4th lecture: Mosquito-borne Diseases III: Bancroftian filariasis, Malayan filariasis etc.  |                           |                          |  |  |                     |
| 5th lecture: Tick-borne Diseases: Scrub typhus, Spotted fever, Tick borne encephalitis, Crimean Congo hemorrhagic fever, Lyme disease, etc.  |                           |                          |  |  |                     |
| 6th lecture: Fly-borne Diseases: Leishmaniasis, Sleeping sickness, Onchocerciasis, Loasis, Cordylobia anthropophaga, etc.  |                           |                          |  |  |                     |
| 7th lecture: Transcutaneous Infection: Schistosomiasis, Hookworm disease, Strongyloidiasis, Leptospirosis, etc.  |                           |                          |  |  |                     |
| 8th lecture: Orally Transmitted Viral Diseases: Hepatitis A and E, Norovirus infection, Rotavirus infection, Poliomyelitis, etc.   |                           |                          |  |  |                     |
| 9th lecture: Orally Transmitted Bacterial Diseases: Escherichia coli infection, Shigellosis, Typhoid fever, Salmonella infection, Cholera, Campylobacter infection, etc.   |                           |                          |  |  |                     |
| 10th lecture: Orally Transmitted Parasitic Diseases I: Amoebic dysentery, Toxoplasmosis, Giardiasis, Ascariasis, etc.  |                           |                          |  |  |                     |
| 11th lecture: Orally Transmitted Parasitic Diseases II: Hookworm disease, Trichuriasis, Clonorchiasis, Fasciolopsiasis, Fascioliasis, Heterophyiasis, Paragonimiasis   |                           |                          |  |  |                     |
| 12th lecture: Infectious diseases caused by mammal bite and sexually transmitted diseases: Rabies, Tetanus, Herpes B virus infection, Pasteurella infection, HIV infection, Syphilis, Gonorrhoea, Chlamydia infection, etc.  |                           |                          |  |  |                     |
| 13th lecture: How to use simple test kit for malaria and dengue fever (incl. practical exercise)   |                           |                          |  |  |                     |
| 14th lecture: 1) Sickness in the airplane and its prevention, 2) How to customize the plan of your travel insurance  |                           |                          |  |  |                     |
| 15th lecture: Which vaccines to choose and how to plan the schedule for vaccination  |                           |                          |  |  |                     |
| ----- <b>Continue to 熱帯病学(2)</b> -----   |                           |                          |  |  |                     |

## 熱帯病学(2)

### [Course requirements]

Desirable for students who learned biology in high school, but NOT REQUIRED

### [Evaluation methods and policy]

Evaluation will be based on a report. The content of the report will include: 1) your research field, 2) sickness popular in your field and measures to prevent infection, 3) what to do when infected.

### [Textbooks]

Not used

### [References, etc.]

#### ( Reference books )

Introduced during class

### [Study outside of class (preparation and review)]

Review what you learned in the lecture by exploring the web sites such as “ International Travel and Health ” by WHO and “ Yellow Book ” by the US-CDC.

### ( Other information (office hours, etc.) )

\*Please visit KULASIS to find out about office hours.

| <b>[Overview and purpose of the course]</b>   |                               |                          |  |                                |                     |
| This class provides an introduction to contemporary African politics. The core question motivating the course is: Why do some African countries suffer from high levels of political violence while others have not? We will study many individual cases and students are expected to try to apply the tools of political science to find some general answers to the question. |                               |                          |  |                                |                     |
| <b>[Course objectives]</b>  |                               |                          |  |                                |                     |
| At the end of this class, students will be able to:<br>1. Understand the political background and the political forces in operation.<br>2. Examine contemporary African political issues.   |                               |                          |  |                                |                     |
| <b>[Course schedule and contents]</b>   |                               |                          |  |                                |                     |
| The following topics will be discussed.<br><br>1. Ethnicity, Religion, Economic Class<br>2. Colonialism, Colonial Rule<br>3. Neo-Colonialism and Colonial Legacy<br>4. Political System<br>5. Regional Organization<br>6. Proxy Wars During the Cold War<br>7. Democratisation and Conflict   |                               |                          |  |                                |                     |

| <p>This course discusses the dynamics of place construction by human/non-human assemblages in contemporary African pastoral societies, using multi-disciplinary theories, ethnographies and research data I have collected. Each year, I will select a theme pertaining to this subject and develop empirical and theoretical arguments together with the course participants. In the 2019 course, we will consider the ecology of place with setting "assemblage" as the key concept, based on both the lecturer's field research on East African pastoralists and the literature review of the relevant studies such as anthropology of domestication, place and space and anthropocene.</p>  |   |                          |  |                                      |                                 |
| <b>[Course objectives]</b>  |   |                          |  |                                      |                                 |
| <p>In this course, we will develop the above areas of interest by analyzing selected domains of place and human/non-human assemblage based on ethnographic materials.</p>   |   |                          |  |                                      |                                 |
| <b>[Course schedule and contents]</b>   |   |                          |  |                                      |                                 |
| <p>This course deals with the following topics, each of which lasts two or three weeks. The topics may be modified according to the interests of the class. The lectures are given mostly in English, although I will use Japanese if all of the students are Japanese.</p> <ol style="list-style-type: none"> <li>1. Ecology and evolution of pastoralism</li> <li>2-3. The domestication of animals</li> <li>4. Socio cultural aspects of pastoral societies in Africa 1: Age system and polygamy</li> <li>5. Socio cultural aspects of pastoral societies in Africa 2: Begging as a mode of communication</li> <li>6-7. Development and sedentarization in East African pastoral societies</li> <li>8-9. The impact of Market economy, nation state and media in East African pastoral societies</li> <li>10-11. Conflict, refugee and peace in East African pastoral societies</li> <li>12-13. Anthropology of space and place</li> <li>14-15. Human/Non-human assemblage in East African pastoral societies: Towards the ecology of place</li> </ol> |   |                          |  |                                      |                                 |
| <b>[Course requirements]</b>  |   |                          |  |                                      |                                 |
| None  |   |                          |  |                                      |                                 |
| <b>[Evaluation methods and policy]</b>  |   |                          |  |                                      |                                 |
| Grading is based primarily on reports and class discussions, with weight given to active engagement in class.   |   |                          |  |                                      |                                 |
